

Hi Everybody,

Up until now Governor Granholm has refused to help us stop the Alba Injection Well. But if enough of us write letters to her we may be able to change her mind.

Below is a letter urging her to overturn the Alba Well permit. You can personalize it to your own style or send it as is. Just [click here to download](#) sign and mail.

Governor Jennifer Granholm
P.O. Box 30013
Lansing, MI 48909

Dear Governor Granholm,

Please intervene to halt the CMS/Beeland permit for an injection well in Alba. The underground aquifers in the Alba area constitute the headwaters of some of Michigan's most pristine rivers, including the Jordan, Manistee and AuSable. Six different watersheds converge in this area, covering most of northern Michigan. Injection wells have failed in the past. Surface spills from storage tanks, truck accidents and flow lines can occur. And an Alba injection well doesn't even begin to solve the cleanup problem at Bay Harbor.

Some points to consider:

1. The DEQ estimates that about 1 million gallons of ground and surface water flow through the CKD buried at Bay Harbor each day. This water should be flowing into Lake Michigan. Instead, it becomes toxic leachate which must be collected and transported out of the Little Traverse Bay watershed for disposal. Shouldn't the off-site disposal of millions of gallons of contaminated ground and surface water be considered a major water diversion and a violation of the Great Lakes Compact?
2. According to the DEQ, the current leachate collection efficiency rate at seep 2 (there are 4 identified seeps), is only 3 - 5%. If all the leachate currently entering Little Traverse Bay from just this one seep were collected and transported off-site for disposal, it would require 250 - 500 tanker truck loads PER DAY.
3. According to Dr. Chris Grobbel's environmental assessment study, the proposed leachate truck route from Bay Harbor to Alba would cross over 20 coldwater and designated trout streams and tributaries, and pass over 9 miles of sensitive wetlands. Even at the current proposed rate of 15 - 20 truck loads of heavy-metal laden leachate a day, for at least 10 years, the chances of an accident or spill are high.
4. Please ask the DEQ and the EPA to protect the natural resources of Michigan and rescind the permit. Lets not contaminate our rivers with Bay Harbor's toxic waste. It does not solve the problem at Bay Harbor, and in fact simply diverts efforts to finding a long term solution to the pollution currently entering Lake Michigan.

Sincerely,
